

How to Size Rings

Know what size ring you need before you shop so you can buy perfectly-fitting jewelry every time. To determine ring size, you can place a ring that fits you on a professional ring sizer mandrel or find an approximate fit with a ring size chart or finger size strip. Make sure to measure your finger at room temperature. Heat and cold can cause your fingers to swell or constrict.

Determine Ring Size With a Ring Size Chart

Use a ring that fits you to determine your ring size. Place your ring over the nearest size circle. The inner edge of the ring should align with the outer edge of the circle. If your ring appears to fit between two sizes, buy the larger size.

Measure Ring Size With a Finger Size Strip

To create your own ring sizer, print and cut the strip below. Insert the narrow end of the sizer through the "cut here" slot. With numbers on the outside, place the loop around your finger, and pull until the fit is snug but comfortable.

In order to print the ring sizer above, be sure that your printer is set to 100%. Make sure that you have not reduced the print size in your printer 'page setup' area. You can verify that the sizer printed correctly by measuring it with a ruler; it should measure from A to B: 3 1/2 inches long. Once you have printed the sizer, follow these directions to find your ring size:

1. Cut out the ring sizer
2. Cut a slit for Slot "A"
3. With the numbers facing out, wrap the sizer around the finger where the ring will be worn.
4. Pull the pointed end Tab "B" through Slot "A" until the sizer is snug, making sure to allow size for the knuckle.
5. The number aligned with Slot "B" is your ring size.
6. If the measure lands between two numbers your size is a half size Ex: Between 5 and 6 ring size: 5.5. If half sizes are not available, order the next largest size.
